in 1952, 150,000 kW were installed in the steam power station I at Tatabanya and 170,000 kW in the power station at Bannhida. At this time, the two power stations mentioned met approximately 50 percent of the entire Hungarian electric current requirements. In 1952, the power stations at Inota and Tiszalok were still under construction and thus were unable to make a major contribution to the power supply of Hungary.

25X1

Comment. In 1953, a total of 3.7 billion kWh of electric energy was produced in Hungary. Assuming a total of 4,000 operating hours per year, the Tatabanya and Banská power stations may have produced approximately 1.28 billion kWh, which would represent about one third of the total production of electric energy in the country.
